

VAMP BODY ART

PRESENTS

Tattoo Aftercare®

The Aftercare Company has supplied the Body Art community with tattoo and piercing aftercare products since 2000. The products were created by Shirley Jaffery, a registered nurse and natural remedy practitioner, who over her nursing career worked in specialist skin units and spent many years working with natural ingredients. Using the highest quality ingredients from nature's pharmacopeia her blends produce results that are the envy of other suppliers.

Tattoo Aftercare® is 100% natural and contains NO paraben preservatives, alcohol, lanolin, food grade colours or nut oils.

Tattoo Aftercare® is the WORLD'S FIRST TRIPLE ACTION tattoo aftercare system covering all of the changing requirements for tattooed skin: **It SOOTHES, MOISTURISES and MAINTAINS tattooed skin!**

This all-in-one balm is suitable for all types of tattooing, including cosmetic tattooing!

Benefits to your studio include:

- **Helps provide full aftercare service to customers**
- **Protects the quality of the work**
- **Less touch-ups needed for tattoo work**
- **Increase studio revenue**
- **Quality product at a fair price**

The Aftercare Company products are approved under the Humane Cosmetics Standard as they are not tested on animals and the recipe blend won the first ever Golden Bunny award from the B.U.A.V. in 2005.

QUALITY WORK DESERVES QUALITY AFTERCARE!

Tattoo Aftercare®

WHAT MAKES THIS PRODUCT SO UNIQUE? IT'S THE INGREDIENTS...

OLIVE OIL (Extra Virgin): This is the more expensive of the olive oils and the purest. Its chemical free nature makes it suitable for those who have allergic reactions. Emollients containing olive oil are useful in treating dry and chapped skin. It is a good skin soother and a useful source of Vitamin E, (an antioxidant that protects tissue from harmful free radicals).

CALENDULA: Calendula's gentle actions help reduce inflammation. It is used for wounds, muscle pain, acne, irritated skin and children's skin. It is compatible with all skin types.

VITAMIN E: Vitamin E is a potent antioxidant that supports a number of body functions including healthy skin. It protects the skin whilst stimulating cellular renewal, allowing the skin to recover and balancing the moisture level of the skin.

SUNFLOWER OIL: In skin care products, sunflower oil is one of the most favoured softening emollients. It is rich in vitamins A, D, and especially in vitamin E and essential fatty acids. Sunflower oil has a light texture and is easily absorbed by skin.

BEESWAX: Beeswax acts as an emulsifier and is nourishing to skin. It is a natural antibiotic. It soothes and softens the skin. Beeswax makes an ideal base for skin care creams, cuts, abrasions, chapped hands, wounds, eczema and psoriasis.

LAVENDER: Lavender is nature's most versatile aromatic plant, renowned for its beauty and medicinal uses. When used in skin care products its soothing and healing qualities will help cuts, sores, burns, inflammation, acne, eczema, psoriasis, insect bites and stings.

TEA TREE: Skin preparations that contain effective but low concentrations of Tea Tree oil have a dual purpose. It provides valuable anti-bacterial, antiseptic and anti-fungal properties which make it an excellent topical oil to prevent infections. Tea Tree also has anaesthetic properties which can remove itch and irritation and soothe the pain which can accelerate the healing of small cuts, grazes and bruises.

NIAOULI: Niaouli is from the same family as Tea Tree. It also has antiseptic properties and is a major antibacterial agent especial in dermatological applications. Its therapeutic qualities provide relief from a variety of ailments including wounds, burns, insect bites, boils and spots.

The blend of Lavender, Tea tree and Niaouli was chosen because the properties, of each oil, when combined with the others create a synergy that provides benefits to the skin greater than the qualities of each oil on its own.

All ingredients come from organic based materials originating from sustainable or cultivated crops.

Use of natural preservatives such as additional Vitamin E, slows down the oxidation process which helps the overall product last significantly longer.

Preserving naturally. The way nature intended!
